Linking

Linking – Anchors Away!

Links are Anchors

- Anchor tag
 - `<a>`
- Can be a named anchor
 - ``
 - Names a spot on a page
- Can be a link
 - ``
 - href attribute tells link where to go
 - Optional `target=""` attribute
 - In what window to open the link
 - `_blank`, `_self`, `_top`, `_parent`

href=""

- Types of href linking
 - `href="english.html"`
 - Links to `english.html` file
 - File in same folder as file with link
 - `href="teas/english.html"`
 - Links to `english.html` file in `teas` folder
 - Folder at same level as page with link
 - `href="../teas/english.html"`
 - `teas` folder is *above* file with link
 - `../` means "go up one level"

href="" - continued

- href="/teas/english.html"
 - Links to `www.mydomain.com/teas/english.html`
 - / means "look in the root directory"
- href="english.html#description"
 - Links to a named anchor in `english.html`
 - Looks for ``
 - # refers to current page
- href="http://www.montet.org"
 - Points to an external Web site
 - `http://` is necessary for external links

target=""

- ``
 - Opens page in current window
 - Default so it isn't necessary
- ``
 - Opens page in a new window
- ``
 - Opens page in top *frames* window
 - Will deal more with this in Dreamweaver II
- ``
 - Cancels all frames and loads page
 - Will deal more with this in Dreamweaver II

What we can link

- Text or images can be linked
 - Text link
 - `Jabberwocky`
 - Image link
 - ``
 - The `border="0"` eliminates the colored border
