
EXERCISE – SET UP BLOG PAGE

This exercise will create a blog page. This blog page will include three different blog posts and links to two other blog pages. Here is the site map for these pages.

PART 1 – UPDATE NEWS TEMPLATE

The blog is based on the Tea_news.dwt template. It is important to have an introduction to the blog. However, the template doesn't currently account for this. Therefore, we need to add a paragraph (within an editable region) to the template.

STEPS

1. Add paragraph to Tea_news.dwt
 - a. Add after "Page Heading" (Hint: use code view to make it easier)
 - b. Use this text: "This is the introduction text for this page."
2. Make the paragraph editable
 - a. (Hint: use design view)
 - b. Call the new area "News Intro"
3. Save your template
 - a. Update any pages when prompted

PART 2 – CREATE THE BLOG PAGE

Here you will create the Tea Blog page. Your content can be found as a link at www.montet.org/wtc/dreamweaver_III.

1. Create a new page based on the Tea_News.dwt template

2. Title should be "Tea Castle | The Tea Blog"
3. Save file as **teablog.html**
4. Add the introduction text per the content document
5. Create 2 posts, one each for:
 - a. **Cup of Brown Joy**
 - b. **Tea Recipe Maker**
6. Add content per the content document

PART 3 – CREATE THE EXTRA PAGES

Here you will need to create two pages. These are pages linked from the 2 blog posts. Create the pages based on the copy document and the posts and the copy document.

You will add the embedded files in class.
